Taras sulieta Beleu	HOJA Nº (1)
64728	FEGMA 4/06/24
Problema 1	
Nos piden utiliza la ley P= 126	
rebennos transformas la misma para poder	utilizar el
metodo de cuadradas minimos.	
P'= Im(P) y t'= In(t), C'o = In(Co)	
, Co = A , C1 = b ,	a en je
1m(fai)=1m(Co)+ C_1 (m(x) No 18 escs.1	y care is
1m (+&1) = 1m (Co) + C1 [m(x)	de la

(80,80) = 9 (41,81) = 240,54534 (P), (80,81) = 46,321869 (P),82> = 149,56833	lo>= 28,928865
240, 41> - 74,32100-1 - 1,423 = 177,30033	
<60,60> <60,60>] [9 46,321869] [6	28,92865
[(1 (e) (e) (e) [46,321869 240,54534]	21 149,56835
NOTA	

```
Ahora louscomos Có y C1:
 9 46,32 1869 [Co] = [28,928865]
46,32 1869 240,54534 [C1] [149,56833]
 900 + 46,32/86901 = 28,928865 (1)
 46,321869 Co + 240,54534 C1 = 149,56833 (2)
    900 = 28,928865 - 46,321869 C1
  C'o = 1/9 (28,928865 - 46,321869 C'1)
Pargo Co en (2):
46,321869 (1/9 (28,928865 - 46,321869 C1))+240,54534C1 = [49,56833
46,321869 (3,21432 - 5,146874 C1) + 240,54534 C1 = 149,56833
     148,89331 - 238,4128232 C1 + 240,54534 C1 = 149,56833
                      2,1325168C_{1}=0,67523
                                C1 = 0,316635
Reemplace C'1 para encoutror C'o:
Co = 1/9 (28, 928865 - 46,321869 (0,316635)) = 1/9 (14,26174) = 1,504638
Volvemen = transformar: Co = e<sup>co</sup> = e<sup>1,584638</sup> = 4,8775 = A
C1=0,316635=B
```
